From this assignment, I learned how to configure EIGRP for IPv4 networks. I learned how to enable EIGRP using an autonomous system number and advertise directly connected networks using the `network` command with wildcard masks. I also understood the difference between a network address and an interface IP address. I learned how to use `passive-interface` to prevent EIGRP updates from being sent through LAN interfaces connected to PCs. The `no auto-summary` command is important when working with discontinuous networks because it prevents automatic classful summarization. I also learned how to verify EIGRP using commands such as `show ip eigrp neighbors`, `show ip protocols`, and `show ip route`. Finally, I verified that EIGRP was working by testing connectivity between PC1, PC2, and PC3.

Cisco Packet Tracer - /home/abrish/Desktop/IBT/Cybersecurity/module 2/Labs/day 7/7.2.2.4 Packet Tracer - Configuring Basic EIGRP with IPv4.pka - Guest - 2026-08-17 18:41:18

PT Activity: 00:17:12

a. What command displays the parameters and other information about the current state of any active IPv4 routing protocol processes configured on the router?

b. On R2, enter the command you listed for 2a and answer the following questions:

How many routers are sharing routing information with R2?

Where is this information located under?

What is the maximum hop count?

Step 3: Verify end-to-end connectivity

PC1, PC2 and PC3 should now be able to ping each other. If not, troubleshoot your EIGRP configurations.

Suggested Scoring Rubric

Activity Section	Question Location	Possible Points	Earned Points
Part 1: Configure EIGRP	Step 1	2	
	Step 2a	2	
Part 1 Total		4	
Part 2: Verify EIGRP Routing	Step 1a	5	
	Step 2a	5	
	Step 2b	6	
Part 2 Total		16	
Packet Tracer Score		80	
Total Score		100	

Time Elapsed: 00:17:12

Completion: 80/80
